

GULLFAKS VILLAGE

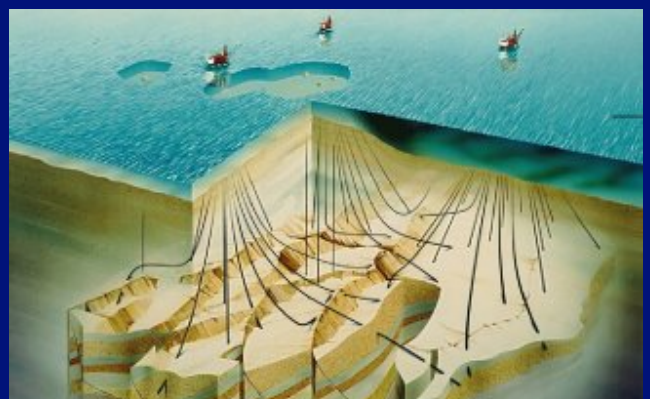

How to extract 10% more oil?

knowledge—creativity—technology—collaboration

You will have close collaboration with Statoil.
Group projects are based on real data and
current challenges for the Gullfaks Field

The Gullfaks Field

The Gullfaks Field is located west of the Sognefjord. Statoil is the operator. Production started in 1986, and the field will produce oil and gas until around 2030.

The expected oil recovery factor (%) is increasing. What is it in 2015?

1986	1996	2000	2006	2015
46	49	55	70	?

In the Gullfaks Village you will be challenged not only professionally but also individually, socially and as team member!
